Yeah, we just did a product demo with another facial recognition technology company. But I haven't heard of this vendor. Thanks for sharing.

Has anyone look into this type technology?

Veritone aiWARE

The Operating System for **Artificial Intelligence**

Hi Martin,

Investigators and crime analysts spend thousands of hours sifting through arrest records, asking colleagues or polling the public to identify perpetrators in video and photographic evidence. This arduous process stalls investigations and drives case clearance rates down.

This is why Veritone created IDentify - to assist law enforcement in closing more cases using facial recognition technology.

Click the link to learn how Anaheim PD used IDentify to tap into their arrest records and identify potential suspects within video evidence, accelerating their investigations and increasing case close rates.
